

## **Senior scientist, High Throughput Screening Cell Biologist, Paris**

HiFiBio is a global biotech company that is rapidly expanding on three continents (US, France and China). The company identifies novel therapeutic antibodies against difficult targets by applying a paradigm-changing droplet microfluidic technology platform.

We are currently expanding our microfluidic assay development capabilities at HiFiBio, Paris site. We are thus looking for a highly motivated cellular biologist expert to develop the next generation of high-throughput droplet based single cell analysis methods for identifying specific and functional antibodies against challenging targets. The candidate must have experience in managing, analyzing and performing high throughput cell-based assays for drug discovery, ideally from early discovery to preclinical validation.

Background in immunology is necessary and expertise in cell biology, disease biology, and drug discovery/development processes is preferred.

We are looking for a senior scientist, with a strong cellular biology background holding a PhD and 2-3 years post-doctoral experience, ideally in an industrial environment. The candidate is meant to bring not only scientific, but also experimental expertise. Excellent presentation skills in English is required as the candidate will present his/her results regularly to both external partners and during internal and company-wide meetings.

Please send your resume and cover letter to Sami Ellouze – Group leader, Microfluidic Assay Development - [s.ellouze@hifibio.com](mailto:s.ellouze@hifibio.com)
